

Improve and safeguard your water quality!

HG Ulfima specialises in solutions that can safeguard the water quality for you.

As specialists in this field we are able to give solid and clear advice in relation to a very practical solution with a guaranteed water quality.

Tap water still always contains a certain amount of bacteria and other contaminants.

Under certain circumstances (temperature, stagnation and the presence of nutrients) these can start to grow and - eventually - start to form a threat for the water quality. The build up of biofilm in the pipes of the water system could give rise to problems, for instance. That is why HG Ulfima has developed the Ulfima®

Stationsstraat 142

The Ulfima® is an ultra filtration machine fitted with filter modules that stop bacteria and viruses. The membrane filtration barrier will remove all bacteria, but also most of the other forms of contamination that contribute to the creation of biofilm. This helps improve the water quality. HG Ulfima also makes use of additional technologies supplied by partner companies to guarantee your water quality, in those instances where the Ulfima® alone is not sufficiently adequate.

HG Ulfima not only improves the quality of your water, but can also help:

- reduce energy costs;
- reduce calcification;
- reduce heat load;
- reduce wear and tear to pipes, valves, taps, etc.
- improve control of legionella risks;
- make your water system easier to control and give you peace of mind.
